**DUN-LC10**

# New Challenge

Full carbon body eyewear

**SANKO KOGAKU CO.,LTD.**

## “Full carbon body”

In the last year, we developed the first “carbon composite” model #DUN-69CC.  
This was the first trial in the world at eyewear industry.  
Although the price was much higher (JPYEN50,000 for retail) and we were worried about unknown material, we have challenged and succeeded better than we expected!

However, we considered.

“Is there any better way to draw out potential for carbon material?”

“What is the best construction when producing full carbon eyewear?”

And, we reached to an answer to produce full carbon by “*Monocoque type*”.

This is also the first trial in the world at eyewear industry.

But we never are afraid of failing, and tried to challenge to the new.

**DUN-LC10** was born from such kind of our passion.

**“*Monocoque type*” construction, which has both Lightness and toughness.**

Enough strength only by outer wall of body,

Hollow inside, succeeding in much lighter.

**Dynamic styling by “*Monocoque type*”**

Possible to make dynamic but light styling.

Only 0.6mm of thickness at the thinnest area.

**Premium fitting by GUMMETAL frame**

Realizing soft flexibility & premium fitting by special titanium alloy “GUMMETAL” inside carbon body.
